

Assured Weather Forecasting--It's More Than Sensors

LEE-VOLKER COX, Colonel, USAF

Director, Operations and Exercises

Col Cox will provide an inside look at critical issues impacting assured weather data from space-based sensors. The presentation will focus on senior leader decision making processes including factors for constellation sustainment, launch capabilities and mission priorities. Additionally, the vital need for understanding space situational awareness and its impact on spacecraft management will be explored. Finally, the current status of DMSP will be discussed.
